  - BVD (Bovine Virus Diarrhea) Type 1
  - BVD (Bovine Virus Diarrhea) Type 2
  - PI₃ (Parainfluenza₃)
  - BRSV (Bovine Respiratory Syncytial Virus)

**Complete Confidence**
- At least 365-day IBR respiratory duration of immunity (DOI)
- 3-day IBR respiratory onset of protective immunity
- At least 365-day BVD Type 1 respiratory DOI
- At least 365-day BVD Type 2 respiratory DOI
- BVD Type 1b cross protection
- BVD Type 2 protection in the face of maternal antibodies — calves vaccinated at 3 days of age
- Challenged calves with severe BVD Type 2 strain 1373 (CN) / 24515 (US)
- Proven cell-mediated immunity (CMI) response to IBR, BVD Type 1 and Type 2 and BRSV viruses
- One-dose BRSV (no booster required)
- Sub-Q administration for higher-quality beef

Always read, understand and follow product label and use as directed.
Your herd, your business and your family. Like you, we believe in protecting what matters.

You know the importance of vaccinations for a healthy herd. And with Vista® vaccines, you know that you're covered.

That's because only Vista vaccines offer the most complete dual-action pneumonia protection and complete, one-dose fetal protection for the entire pregnancy. And Vista products are now labeled for pregnant cows and nursing calves.

Get reliable protection for what matters to you. Talk to your veterinarian or animal health supplier about Vista vaccines.
